WUARDA 10XM2M-CARD-EU

Pack 10 SIM cards M2M - GlobalSIM Multi-operator - 2G/3G/4G/5G - Flat data rate for alarm centres - Supports SMS and calls (cost in description)

Multi-operator GlobalSIM cards with automatic connection to different operators according to coverage. Multiband 2G/3G/4G/5G, so that they can work in each zone with any available band automatically, without the need for intervention to switch between operators or frequency bands.

Includes flat rate data for exclusive use of alarm panels, providing all the monthly data needed for any alarm on the market. Avoiding surprises in the bill for the consumption of the panel, also including 2 SMS and 2 minutes of calls per month for the control panels that need activation by any of these methods. More calls and SMS will cost 8 cents per SMS and 15 cents per minute of call.

The SIM cards are already pre-activated so the only thing the installer has to do is to insert them in the alarm control panel and as soon as they have data consumption they will activate themselves, without the need to do any management in any activation platform that could result in a slow installation.
