MARCA BLANCA RFID-CARD

Proximity card - Identification by radio-frequency - Passive RFID - Low frequency 125 KHz - Light & portable - Maximum security

RF proximity card.

Automatic user identification by RFID. Passive card, when in proximity to the reader is activated by magnetic induction. When activated (electromagnetic induction) it returns a code to the system so requires no battery.

Communication with the reader is with a 125KHz low frequency radio antenna.

Manufactured in PVC and with a similar size to most credit cards so can be transported in most card wallets.
